i>Hedged – Equity & Equity Derivatives		25	80
ii>Unhedged – Equity & Equity related instruments **		10	40

The notional value of exposure in equity derivatives would be reckoned for equity securities exposure. The notional value of exposure in debt derivatives would be reckoned for debt and money market securities exposure.			
The Cumulative Gross Exposure to Equity, Debt, Money market instruments, Derivatives, repo transactions in corporate debt securities etc. and such other securities/assets as may be permitted by SEBI Board from time to time, subject to prior approval from SEBI, if required, should not exceed 100% of the net assets of the scheme in line with clause 12.24 of SEBI Master Circular on Mutual Funds dated June 27, 2024.			
According to clause 1A of Seventh Schedule of SEBI (Mutual Funds) Regulations, 1996, a mutual fund scheme shall not invest in unlisted debt instruments including commercial papers, except Government Securities and other money market instruments: Provided that Mutual Fund Schemes may invest in unlisted non-convertible debentures up to a maximum of 10% of the debt portfolio of the scheme subject to such conditions as may be specified by the Board from time to time: Provided further that mutual fund schemes shall comply with the norms under this clause within the time and in the manner as may be specified by the Board: Provided further that the norms for investments by mutual fund schemes in unrated debt instruments shall be specified by the Board from time to time.

However, mutual fund schemes may invest in unlisted Non-Convertible Debentures (NCDs) not exceeding 10% of the debt portfolio of the scheme subject to the			

condition that such unlisted NCDs have a simple structure (i.e. with fixed and uniform coupon, fixed maturity period, without any options, fully paid up upfront, without any credit enhancements or structured obligations) and are rated and secured with coupon payment frequency on monthly basis.

Such changes in the investment pattern will be for short term and defensive considerations.</p>				

Under defensive circumstances, the asset allocation may be as follows:

Instruments	Indicative allocations (% of total assets)	
	Minimum	Maximum
Equity & Equity related instruments, of which	15	90
i>Hedged – Equity & Equity Derivatives	5	80
ii> Unhedged – Equity & Equity related instruments	10	40

~ including TREPS/ reverse repos, equity linked debentures margin money and securitized debt

**This denotes only net long equity exposures aimed to gain from potential capital appreciation of these positions. Thus, it is a directional equity exposure which will not be hedged.

The allocation under defensive circumstances will be made keeping in view the interest of the Unit holders. Such position will be closely monitored by the Fund Managers and necessary rebalancing will be done at suitable opportunity but not later than 30 days.

Further, the AMC shall comply with the applicable regulatory guidelines related to reporting and disclosure requirements as specified in the aforesaid circular.

The notional value of exposure in equity derivatives would be reckoned for equity securities exposure. The notional value of exposure in debt derivatives would be reckoned for debt and money market securities exposure.

Note:

(i) The asset allocation as given under normal circumstances is indicative and may vary according to circumstances at the sole discretion of the Fund Manager. Review and rebalancing will be conducted when the asset allocation falls outside the range indicated above, within a reasonable period of time.

The Scheme may employ an internal proprietary model to monitor market trends and determine the optimal asset allocation across various asset classes. This model serves as a guiding framework, offering insights into relative valuation levels and potential asset allocation opportunities within the market. Given the market's dynamic nature, the Fund Manager may refer to this model as a broad indicator; however, they retain full discretion to exercise independent judgment in determining allocation percentages, intervals, and approaches that best align with the fund's investment objectives. The proprietary model may incorporate various parameters, including Adjusted Price-to-Book Value of equity market indices (with a Return on Equity overlay), the Ratio of G-Sec Yield to Earnings Yield of equity market indices, and Equity and Debt Momentum, to establish asset allocation levels within the portfolio. This model may undergo periodic revisions as needed, leading to the inclusion or removal of parameters and adjustments to their respective weightages.

	<p>DEPLOYMENT OF FUNDS DURING NEW FUND OFFER (NFO) PERIOD:</p> <p>As per Regulation 35(5) of MF Regulations and SEBI Circular dated February 14, 2025, the AMC shall deploy the funds garnered in the NFO within 30 business days from the date of allotment of units.</p> <p>In an exceptional case, if the Quant AMC is not able to deploy the funds in 30 business days, reasons in writing, including details of efforts taken to deploy the funds, shall be placed before the Investment Committee of Quant AMC. The Investment Committee may extend the timeline by 30 business days, while also making recommendations on how to ensure deployment within 30 business days going forward and monitoring the same. The Investment Committee shall examine the root cause for delay in deployment before granting approval for part or full extension. The Investment Committee shall not ordinarily give part or full extension where the assets for any scheme are liquid and readily available.</p> <p>In case the funds are not deployed as per the asset allocation mentioned in the SID as per the aforesaid mandated plus extended timelines, AMC shall:</p> <ol style="list-style-type: none"> not be permitted to receive fresh flows in the same scheme till the time the funds are deployed as per the asset allocation mentioned in the SID. not be permitted to levy exit load, if any, on the investors exiting the scheme after 60 business days of not complying with the asset allocation of the scheme. inform all investors of the NFO, about the exit option without exit load, via email, SMS or other similar mode of communication. report deviation, if any, to Trustees at each of the above stages. <p>To effectively manage the fund flows in NFO, the fund manager(s) may extend or shorten the NFO period, based on their view of the market dynamics, availability of assets and their ability to deploy funds collected in NFO. However, the same shall be subject to compliance with Para 1.10.1 and 1.10.1A of the SEBI Master Circular for Mutual Funds dated June 27, 2024.</p> <p>CHANGES IN ASSET ALLOCATION PATTERN / PORTFOLIO REBALANCING:</p> <p>Short Term Defensive Consideration: Subject to SEBI (MF) Regulations the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute and that they can vary substantially depending upon the perception of the Investment Manager, the intention being at all times to seek to protect the interests of the Unit holders. As per clause 1.14.1.2.b of SEBI Master Circular on Mutual Funds dated June 27, 2024, as may be amended from time to time, such changes in the investment pattern will be for short term and for defensive consideration only.</p> <p>In the event of change in the asset allocation, the fund manager will carry out portfolio rebalancing within 30 calendar days or such other timeline as may be prescribed by SEBI from time to time.</p> <p>Portfolio Rebalancing (in case of passive breaches):</p> <p>As per clause 2.9 of SEBI Master Circular on Mutual Funds dated June 27, 2024, as may be amended/ clarified from time to time, in the event of change in the asset allocation due to</p>

	<p>passive breaches (occurrence of instances not arising out of omission and commission of the AMC), the fund manager is required to carry out portfolio rebalancing within 30 Business Days.</p> <p>In case the portfolio is not rebalanced within the period of 30 Business Days, justification in writing, including details of efforts taken to rebalance the portfolio shall be placed before the Investment Committee. The Investment Committee, if it so desires, can extend the timeline for rebalancing up to 60 Business Days from the date of completion of mandated rebalancing period. In case the portfolio of the scheme is not rebalanced within the aforementioned mandated plus extended timelines, the AMC shall follow the requirements specified under the aforesaid circular including reporting the deviation to Trustees at each stage.</p>
Investment Strategy	<p>The scheme will predominantly be actively managed to achieve its investment objective.</p> <p>The net assets of the Scheme are invested primarily into equity and equity related instruments including equity derivatives. The Scheme invests rest of the assets into debt and money market instruments for liquidity and regular income.</p> <p>The scheme has a dual objective of generating income by investing in debt and money market securities as well as generating capital appreciation by investing in equity and equity related securities. It will seek to reduce volatility of returns by actively using equity derivatives as hedge. Further, the scheme may invest into equity stocks in the cash market and take short position in futures market to avail arbitrage between spot & futures market and reduce net long equity exposure.</p> <p>For details, please refer SID</p>
Risk Profile of the Scheme	<p>Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment.</p> <p>Scheme specific risk factors are summarized below:</p> <p>“Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies”.</p> <p>“The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments”</p> <p>The performance of the scheme may be affected by the corporate performance, macroeconomic factors, changes in Government policies, general levels of interest rates and risk associated with trading volumes, liquidity and settlement systems in the securities markets. Low trading volumes, settlement periods and transfer procedures may restrict the liquidity of the scheme’s investments. Transacting may become difficult due to extreme volatility in the market resulting in constriction in volumes. Additionally, changes in the SEBI/ RBI regulations/Guidelines may have an adverse impact on the liquidity of the scheme. Different segments of the Indian financial markets have different settlement periods, and such period may be extended significantly by unforeseen circumstances. The length of time for settlement may affect the Scheme in the event the Scheme has to meet an inordinately large number of redemption requests. In addition, the Trustee, at its sole</p>

	<p>discretion, reserves the right to limit or withdraw sale and/or repurchase/redemption and/or switching of the units in the scheme (including any one of the Plans of the scheme) temporarily or indefinitely under certain circumstances. The scheme will retain certain investments in cash or cash equivalent for the day-to-day liquidity requirements. In case of a large redemption, the scheme may need to reverse the spot-futures transaction before the date of futures' settlement. This eventuality may lead to the basis risk. While reversing the spot-futures transaction on the Futures & Options settlement day on the National Stock Exchange, there could be a risk of volume-weighted-average price of the market being different from the price at which the actual reversal is processed. This may result in basis risk.</p> <p><u>1. Risks associated with Equity investment</u></p> <ul style="list-style-type: none"> • Market Risk: The scheme proposes to invest in equity and equity-related securities. Prices, trading volumes, settlement periods and transfer procedures may restrict liquidity of investments in equity and equity-related securities. Market risk is a risk which is inherent to an equity investment. ♣ Liquidity Risk: Risk will be monitored in terms of the number of days it takes to liquidate every stock in the portfolio assuming a share of the average volume traded over the previous one year. Efforts would be made to keep the average liquidation period under prudent limits prescribed internally. While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments may be limited by overall trading volumes of the stock exchanges. ♣ Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. <p>Additionally, the liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment. ♣ Liquidity in Equity investments may be affected by trading volumes, settlement periods and transfer procedures. These factors may also affect the Scheme's ability to make intended purchases/sales, cause potential losses to the Scheme and result in the Scheme missing certain investment opportunities. These factors can also affect the time taken by quant Mutual Fund for redemption of Units, which could be significant in the event of receipt of a very large number of redemption requests or very large value redemption requests. In view of this, redemption may be limited or suspended after approval from the Boards of Directors of the AMC and the Trustee, under certain circumstances as described in the Statement of Additional Information. ♣ Potential Loss associated with Derivative Trading pertaining to Equity Markets: a) In case of investments in index futures, the risk would be the same as in the case of investments in a portfolio of shares representing an index. The extent of loss is the same as in the underlying stocks. In case futures are used for hedging a portfolio of stocks, which is different from the index stocks, the extent of loss could be more or less depending on the coefficient of variation of such portfolio with respect to the index; such coefficient is known as Beta. b) The risk (loss) for an options buyer is limited to the premium paid, while the risk (loss) of an options writer is unlimited, the latter's gains being limited to the premiums earned. The writer of a put option bears a risk of loss if the value of the underlying asset declines below the exercise price. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price. ♣ Concentration Risk: Scheme may restrict its investments only to a particular sector. If the sector, for any reason, fails to perform, the portfolio value will plummet, and the Investment Manager will not be able to diversify the investment in any other sector. Investments under this scheme will be in a portfolio of diversified equity or equity related stocks spanning across a few selected sectors. Hence</p>

the concentration risks could be high.

2. Risk Factors associated with investment in Fixed Income Securities

- Interest rate risk: This risk results from changes in demand and supply for money and other macroeconomic factors and creates price changes in the value of debt instruments. Consequently, the Net Asset Value of the scheme may be subject to fluctuation. Changes in the interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby possible movements in the NAV. This may expose the scheme to possible capital erosion
- Credit risk or default risk: This refers to the risk that an issuer of a fixed income security may default (i.e. will be unable to make timely principal and interest payments on the security). Default risk / credit risk arises due to an issuer's inability to meet obligations on the principal repayment and interest payments. Because of this risk corporate debentures are sold at a yield above those offered on Government Securities, which are sovereign obligations and free of credit risk. Normally the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.
- Market risk: This risk arises due to price volatility due to such factors as interest sensitivity, market perception or the credit worthiness of the issuer and general market liquidity, change in interest rate expectations and liquidity flows. Market risk is a risk which is inherent to investments in securities. This may expose the scheme to possible capital erosion.
- Reinvestment risk: This risk refers to the interest rate levels at which cash flows received for the securities in the Scheme are reinvested. Investments in debt instruments are subject to reinvestment risks as interest rates prevailing on interest or maturity due dates may differ from the original coupon of the bond, which might result in the proceeds being invested at a lower rate. The additional risk from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk today is a characteristic of the Indian fixed income market.
- Certain fixed income securities give an issuer the right to call its securities, before their maturity date, in periods of declining interest rates. The possibility of such prepayment risk may force the fund to re-invest the proceeds of such investments in securities offering lower yields, thereby reducing the fund's interest income.
- The scheme may invest in non-publicly offered debt securities. This may expose the scheme to liquidity risks.
- Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risks. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
- Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the scheme.
- The use of an Interest Rate Swap ('IRS') does not eliminate the credit (default) risk on the original investment. While the fixed to floating rate IRS reduces interest rate risk caused by rise in interest rates, it also restricts the profit in case interest rates decline. In case of a floating to fixed rate swap, any subsequent rise in interest rates will result in a loss like in any fixed rate investment. Any IRS carries, the risk of default of the

	<p>counter party to the swap, which may lead to a loss. Such loss is usually, a small proportion of the notional principal amount of the swap. • Basis Risk: During the life of floating rate security or a swap the underlying benchmark index may become less active and may not capture the actual movement in the interest rates or at times the benchmark may cease to exist. These types of events may result in loss of value in the portfolio. Where swaps are used to hedge an underlying fixed income security, basis risk could arise when the fixed income yield curve moves differently from that of the swap benchmark curve.</p> <p><u>3. Risks associated with Derivatives</u></p> <p>• Derivatives are high risk, high return instruments as they may be highly leveraged. A small price movement in the underlying security could have a large impact on their value and may also result in a loss. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. • Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. • The Scheme may find it difficult or impossible to execute derivative transactions in certain circumstances. For example, when there are insufficient bids or suspension of trading due to price limit or circuit breakers, the Scheme may face a liquidity issue. • The Stock Exchange may impose restrictions on exercise of options and may also restrict the exercise of options at certain times in specified circumstances and this could impact the value of the portfolio. • In case of investments in index futures, the risk would be the same as in the case of investments in a portfolio of shares representing an index. The extent of loss is the same as in the underlying stocks. In case futures are used for hedging a portfolio of stocks, which is different from the index stocks, the extent of loss could be more or less depending on the coefficient of variation of such portfolio with respect to the index; such coefficient is known as Beta. • The risks associated with futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and potential mispricing of the futures and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. • The Long position in the Index (e.g. Nifty Index) will have as much loss as the gain in the short portfolio if hedged completely and would be vice versa if we were holding long portfolio, short Index. • While Futures markets are typically more liquid than the underlying cash market, there can be no assurance that ready liquidity would exist at all points in time for scheme to purchase or close out a specific futures contract. • The risk (loss) for an options buyer is limited to the premium paid, while the risk (loss) of an options writer is unlimited, the latter's gains being limited to the premiums earned. However, in the case of quant Mutual Fund, all option positions will have underlying assets and therefore all losses due to price movement beyond the strike price will actually be an opportunity loss. The writer of a put option bears a risk of loss if the value of the underlying asset declines below the exercise price. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price. • Risks associated with writing Covered Call Options for Equity Shares A call option gives the holder (buyer) the right but not the obligation to buy an asset by a certain date for a certain price. Covered calls are an options strategy where a person holds a long position in an asset and writes (sells) call options on that same asset to generate an income stream. The Scheme may write call options under covered call strategy, as permitted by the regulations. Risks associated thereto are mentioned below: - Opportunity cost: A covered call strategy limits the upside potential of the underlying stock. If the stock rises sharply, the gains above the call option's</p>
--	---

	<p>strike price will be missed out. When the underlying asset's price rises above the strike price, the short call loses its value as much as the underlying stock gains and as a result the upside of the stock always gets capped. Downside risk is reduced by writing covered call options. - Exit issues / Illiquidity risk: If the strike price at which the call option contracts have been written become illiquid, the scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity. Also, if covered call options are sold to the maximum extent allowed by regulatory authority, the scheme may not be able to sell the underlying equity shares immediately in case where the view changes to sell and exit the stock. - The total gross exposure related to option premium paid and received must not exceed the regulatory limits of the net assets of the scheme. This may restrict the ability of scheme to utilize options strategies. • The Scheme may find it difficult or impossible to execute derivative transactions in certain circumstances. For example, when there are insufficient bids or suspension of trading due to price limit or circuit breakers, the Scheme may face a liquidity issue. • The Stock Exchange may impose restrictions on exercise of options and may also restrict the exercise of options at certain times in specified circumstances and this could impact the value of the portfolio. • The certain risk factors arising out of a derivative strategy may be as below: - Lack of opportunity available in the market. - Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place. - Exchanges could raise the initial margin, variation margin or other forms of margin on derivative contracts, impose one sided margin or insist that margins be placed in cash. All of these might force positions to be unwound at a loss and might materially impact returns. • Interest rate swaps and Forward Rate Agreement require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that the derivative adds to the portfolio and the ability to forecast failure of another party (usually referred to as the "counter-party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives, the credit risk where the danger is that of a counter-party failing to honour its commitment, liquidity risk where the danger is that the derivative cannot be sold at prices that reflect the underlying assets, rates and indices, and price risk where the market price may move in adverse fashion.</p> <p><u>4. Risks associated with Securitised Debts</u></p> <p>The Risks involved in Securitised Papers described below are the principal ones and does not represent that the statement of risks set out hereunder is exhaustive. • Limited Liquidity & Price Risk There is no assurance that a deep secondary market will develop for the Certificates. This could limit the ability of the investor to resell them. • Limited Recourse, Delinquency and Credit Risk The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the Certificate Holders against the Investors' Representative. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts to the Certificate Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the Asset. However, many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realise the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor. • Risks due to possible prepayments and Charge Offs In the event of prepayments, investors may be exposed to changes in tenor and yield.</p>
--	--

Also, any Charge Offs would result in the reduction in the tenor of the Pass Through Certificates (PTCs). • Bankruptcy of Bank with Liquidity facility If the Bank with Liquidity facility, becomes subject to bankruptcy proceedings then an investor could experience losses or delays in the payments. • Risk of Co-mingling With respect to the Certificates, the Servicer will deposit all payments received from the Obligor into the Collection Account. However, there could be a time gap between collection by a Servicer and depositing the same into the Collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the Loan Agreements may not be segregated from other funds of originator. If originator in its capacity as Servicer fails to remit such funds due to Investors, the Investors may be exposed to a potential loss.

5. Risks associated with Securities Lending

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The scheme may not be able to sell lent out securities, which can lead to temporary illiquidity & loss of opportunity.

6. Risk factors associated with processing of transaction through Stock Exchange Mechanism

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the AMC has no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

7. Risk factors associated with investment in Tri-Party Repo

All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by Clearing Corporation of India (CCIL). This reduces the settlement and counterparty risks considerably. Mutual funds are member of securities segment and Triparty Repo trade settlement of CCIL. The members are required to contribute an amount from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the no defaulting members. Thus, the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. Additionally, the fund contribution is allowed to meet the residual loss in case of default by the other clearing member (the defaulting member). CCIL maintains two separate Default Funds with respect to the

	<p>Securities Segment. One with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. Therefore, mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund.</p> <p>8. <u>Risk factors associated with REITs and InvITs:</u></p> <ul style="list-style-type: none"> • Price Risk: Securities/Instruments of REITs and InvITs are volatile and prone to price fluctuations on a daily basis owing to market movements. The extent of fall or rise in the prices is a fluctuation in general market conditions, factors and forces affecting capital market, Real Estate and Infrastructure sectors, level of interest rates, trading volumes, settlement periods and transfer procedures. • Interest Rate Risk: Securities/Instruments of REITs and InvITs run interest rate risk. Generally, when interest rates rise, prices of units fall and when interest rates drop, such prices increase. • Credit Risk: Credit risk means that the issuer of a REIT/InvIT security/ instrument may default on interest payment or even on paying back the principal amount on maturity. Securities/ Instruments of REITs and InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled. • Liquidity Risk: This refers to the ease with which securities/instruments of REITs/InvITs can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities/instruments for which a liquid market exists. As these products are new to the market they are likely to be exposed to liquidity risk. • Reinvestment Risk: Investments in securities/instruments of REITs and InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or Dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower return <p>Legal and Regulatory Risk: The regulatory framework governing investments in securities/instruments of REITs and InvITs comprises a relatively new set of regulations and is therefore untested, interpretation and enforcement by regulators and courts involves uncertainties. Presently, it is difficult to forecast as to how any new laws, regulations or standards or future amendments will affect the issuers of REITs/InvITs and the sector as a whole. Furthermore, no assurance can be given that the regulatory system will not change in a way that will impair the ability of the Issuers to comply with the regulations, conduct the business, compete effectively or make distributions.</p> <p>9. <u>Risk factors associated for investments in Mutual Fund Schemes</u></p> <ol style="list-style-type: none"> 1. Movements in the Net Asset Value (NAV) of these Schemes may impact the performance. Any change in the investment policies or fundamental attributes of these Schemes will affect the performance of the Scheme to the extent of investment in such schemes. 2. Redemptions by in these Schemes would be subject to applicable exit loads. <p>For details on risk factors and risk mitigation measures, please refer SID.</p>

Individual ARN holders including senior citizens are also required to obtain and quote EUIIN in the Application Form. Hence, if your investments are routed through a distributor please ensure that the EUIIN is correctly filled up in the Application Form. It is further clarified that a mere quoting of EUIIN will not give an "advisory" character to the transaction. However, in case of any exceptional cases where there is no interaction by the employee/sales person/relationship manager of the distributor/sub broker with respect to the transaction, AMCs shall take the declaration separately signed by the investor, as mentioned on the top of the application form(s).

Should the applicant desire to change KYC related information, POS will extend the services of effecting such changes. In case of an existing investor of qMF who is already KYC Compliant under the erstwhile centralized KYC with CVL (CVLMF) then there will be no effect on subsequent Purchase/Additional Purchase (or ongoing SIPs/STPs, etc) in the existing folios/accounts which are KYC compliant. Updation of 'missing / not available' KYC information along with IPV is currently a one-time requirement and needs to be completed with any one of the mutual funds i.e. need not be done with all the mutual funds where investors have existing investments. The said form is available on qMF's website i.e. www.quant-mutual.com or on the website of Association of Mutual Funds in India i.e. www.amfiindia.com or on the website of any authorised KRA's. Once the same is done then the KYC status at CVL-KRA will change to 'Verified by CVL KRA' after due verification.
